

XM radio is a very useful tool for frequent travelers and business people. It provides weather and traffic information for cities that are not familiar to us on a daily basis. This is a safety feature for us in that we do not have to search radio bands for that information while driving. The distraction of searching for traffic information during rush hour in a large metro areas is a danger to us and other motorists. Please keep in mind that XM radio provides a service to the community at large. I oppose oppose HR 4026 and hope you will too.
